SDG Goal	SDG Target	IAEG Indicator ¹	Year 2015	
			Lao PDR	Asia-Pacific Developing
6 CLEAN WATER AND SANITATION 	6.4 – Increase water-use efficiency	6.4.1 – Water Intensity (<i>litres per US dollar</i>)	604	220
7 AFFORDABLE AND CLEAN ENERGY 	7.2 – Increase share of renewable energy	7.2.1 – Renewable energy share in total primary energy supply ² (<i>percentage</i>)	19.8%	18.3%
	7.3 – Improve energy efficiency	7.3.1 Energy Intensity (<i>megajoules per dollar</i>)	27	25.1
8 DECENT WORK AND ECONOMIC GROWTH 	8.4 – Resource efficiency and decouple economic growth from environmental degradation	8.4.1 and 12.2.1 – Material Footprint		
		Total (<i>million tonnes</i>)	44	40,728
		Per capita (<i>tonnes</i>)	6.3	10.8
12 RESPONSIBLE CONSUMPTION AND PRODUCTION 	12.2 – Sustainable management and efficient use of natural resources	8.4.2 and 12.2.2 – Domestic Material Consumption		
		Total (<i>million tonnes</i>)	70	47,813
		Per capita (<i>tonnes</i>)	10	12.7
		Per dollar (<i>Kilograms per dollar</i>)	12.1	5.3
17 PARTNERSHIPS FOR THE GOALS 	17.11 – Exports of developing countries	17.11.1 – Developing countries and least developed countries export value		
		Exports (<i>million dollars</i>)	1,592	3,189,657
		Exports (<i>million tonnes</i>)	1.5	2,304
		Unit price of exports (<i>dollars per kilogram</i>)	1.1	1.4

¹ According to the "Report of the Inter-Agency and Expert Group on Sustainable Development Goal Indicators", Item 3 (a) of the provisional agenda, Forty-seventh session of the Statistical Commission on 8-11 March 2016 at <http://unstats.un.org/unsd/statcom/47th-session/documents/2016-2-SDGs-Rev1-E.pdf>

² Share of Renewables and Hydro of the Total Primary Energy Supply.

Materials

Materials are the 'things' that make up the products and infrastructure of our society. They include biomass (crops, livestock, forest products, fish), fossil fuels (coal, oil, gas), metals and minerals.

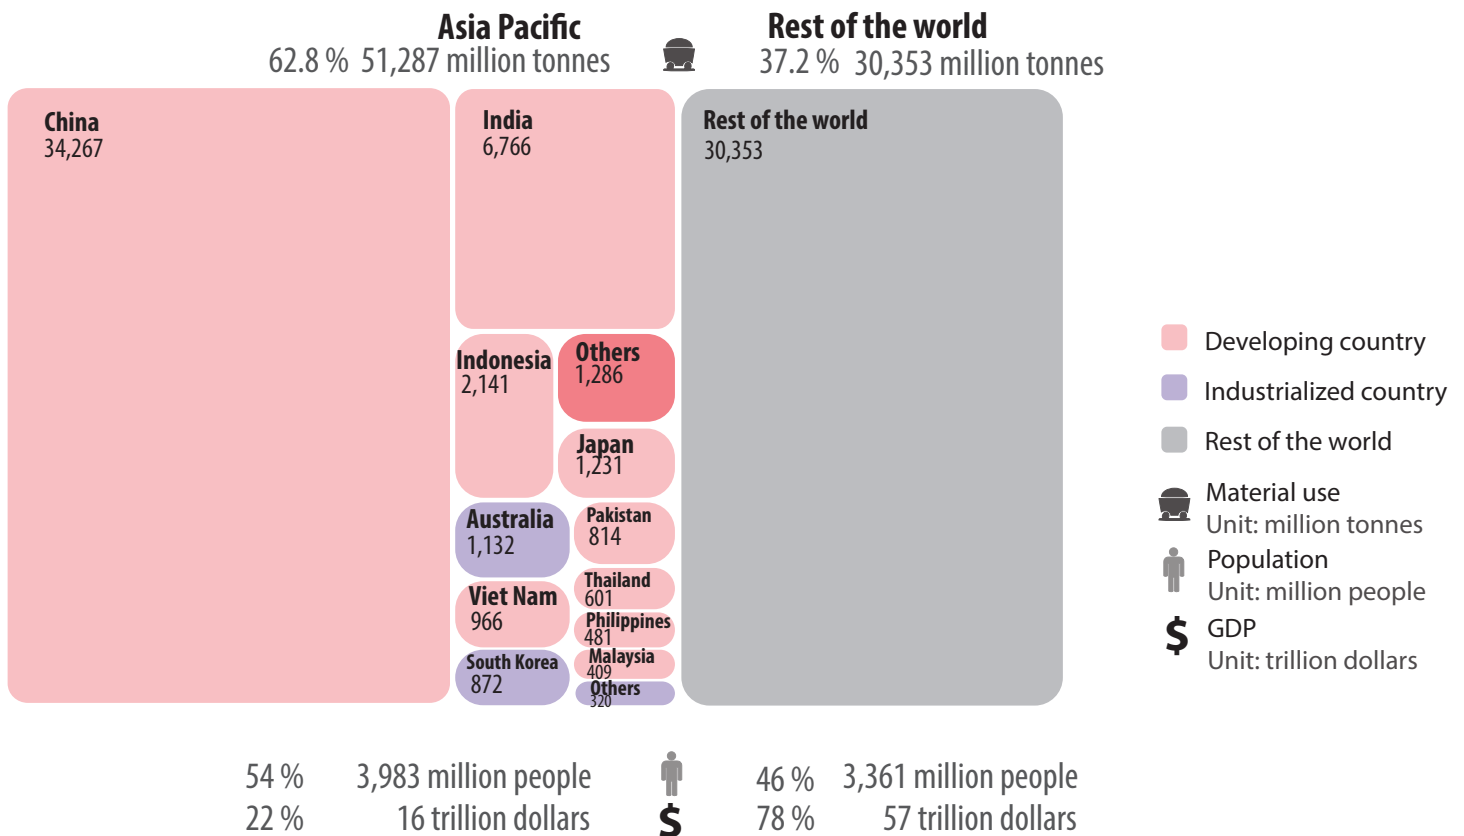

These materials underpin human nutrition and health, fuel energy systems and provide the structural base for buildings, transport networks, vehicles and all consumer goods.

The SDGs relevant to materials are:

SDG Target	IAEG Indicator	Lao PDR		Asia-Pacific Developing	
		2010	2015	2010	2015
8.4 – Resource efficiency and decouple economic growth from environmental degradation	8.4.1 and 12.2.1 – Material Footprint				
	Total (<i>million tonnes</i>)	31	44	28,833	40,729
	Per capita (<i>tonnes</i>)	4.8	6.3	7.9	10.8
	Per dollar (<i>Kilograms per dollar</i>)	7.7	7.7	4.4	4.5
12.2 – Sustainable management and efficient use of natural resources	8.4.2 and 12.2.2 – Domestic Material Consumption				
	Total (<i>million tonnes</i>)	48	70	33,885	47,813
	Per capita (<i>tonnes</i>)	7.5	10	9.3	12.7
	Per dollar (<i>Kilograms per dollar</i>)	12.1	12.1	5.2	5.3

IAEG indicator 12.2.2:

Lao PDR has a Domestic Material Consumption of 70 million tonnes of material per year. It grew by 45% between 2010 and 2015.

IAEG indicator 12.2.1:

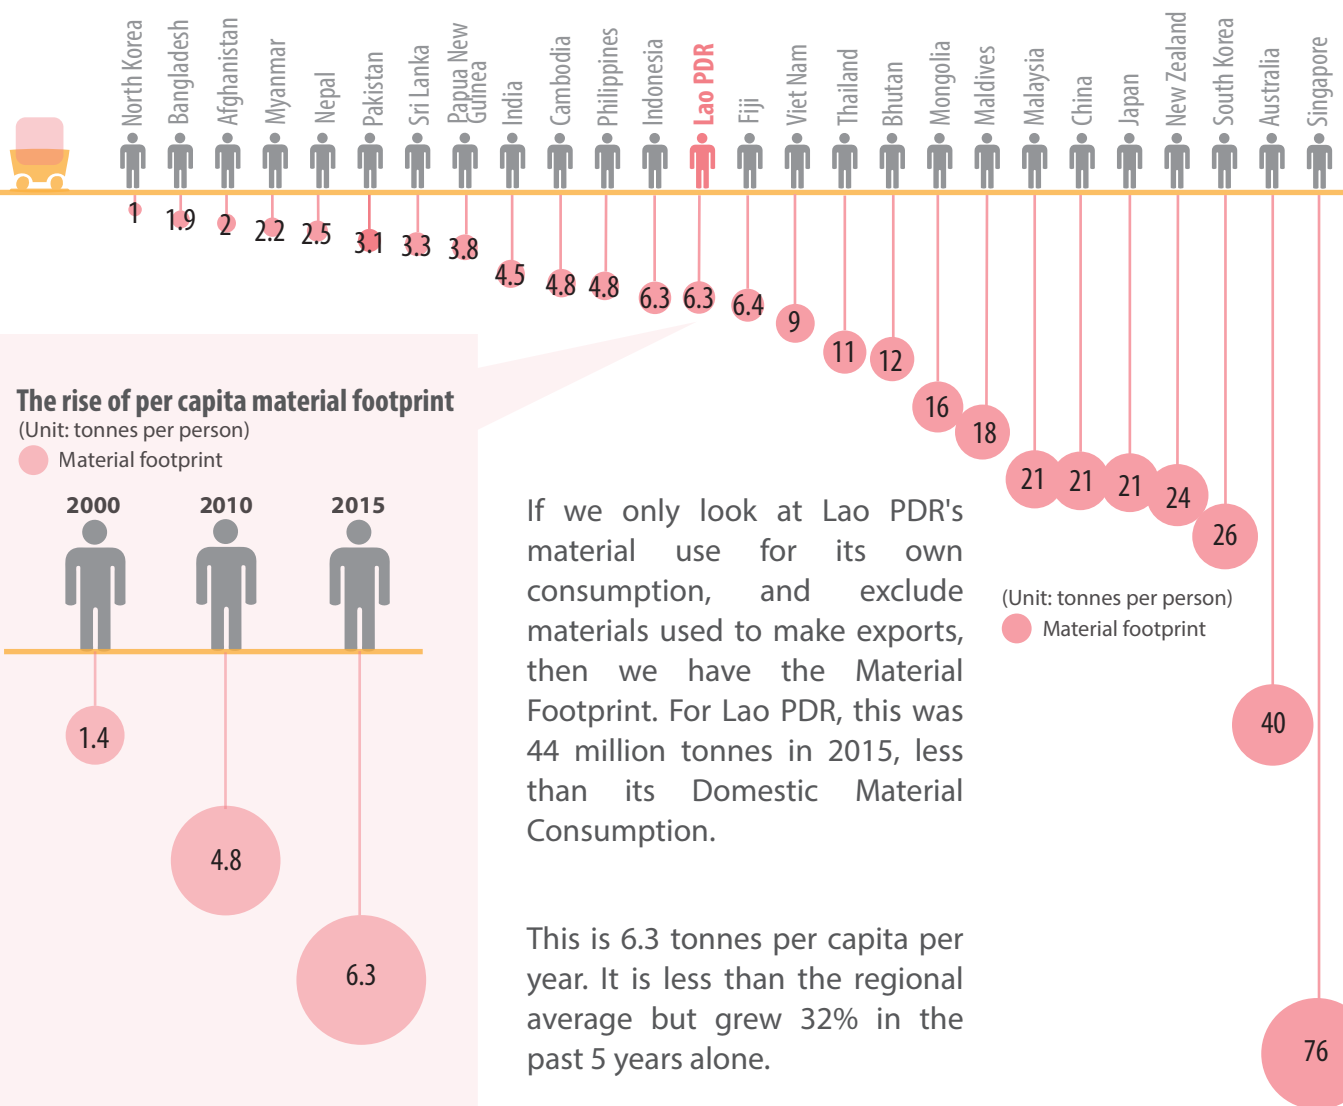

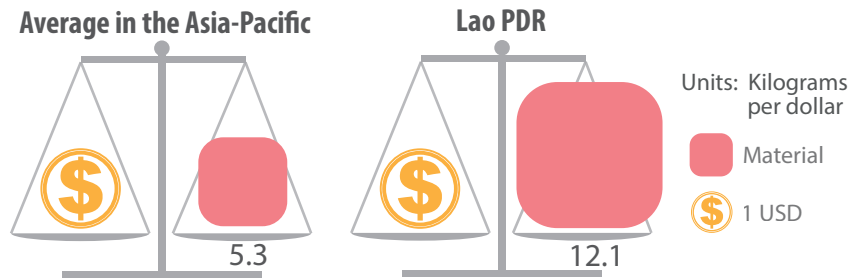

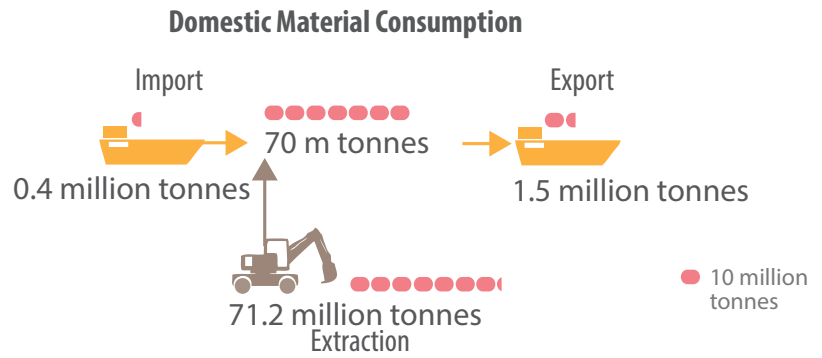

Lao PDR's Domestic Material Consumption is 70 million tonnes. This consists of 71.5 million tonnes extracted from its environment plus the 0.5 million tonnes imported, less 2 million tonnes exported material.

IAEG indicator 12.2.2:

Lao PDR uses 12.1 kilograms per dollar - this is called Material Intensity. It is 129% higher than other developing Asia and Pacific countries.

IAEG indicator 12.2.1

What about material footprint per capita in 2015?

Energy

Energy use is measured with the indicator primary energy supply. This indicator reports the total amount of energy (in joules) available to businesses and households in an economy by summing up domestically produced energy and energy imports and subtracting energy exports. The supply of primary energy may come from different energy sources including coal, petroleum, natural gas, uranium, and renewable energy sources such as hydro, solar and wind. Electricity is only included if it is exported or imported – in all other cases it is derived from one of the energy sources already measured.

The SDGs relevant to materials are:

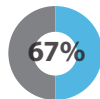

SDG Target	IAEG Indicator	Lao PDR		Asia-Pacific Developing	
		2010	2015	2010	2015
7.2 – Increase share of renewable energy	7.2.1 – Renewable energy share in total primary energy supply ³ (percentage)	25.4%	19.8%	17.7%	18.32%
7.3 – Improve energy efficiency	7.3.1 – Energy Intensity (Megajoules per dollar)	26.6	26.6	25.0	25.1

IAEG indicator 7.2.1:

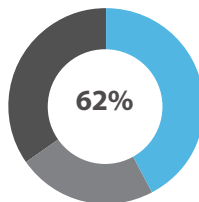

Lao PDR used 154 petajoules of energy in 2015. Of this, 64% was renewable.

The amount of renewable energy grew each year, but the amount of non-renewable energy grew slower, therefore the share of renewable energy is increasing.

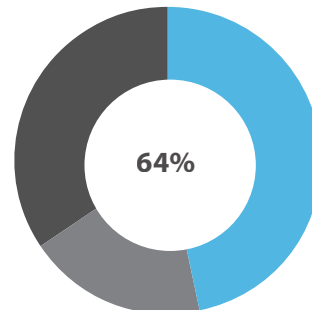

1990

2005

2015

Unit: Petajoules

Renewables

Hydro

Natural gas

Petroleum

Coal

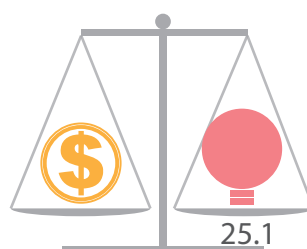

Other

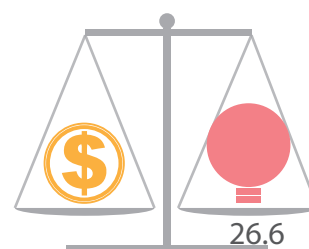

IAEG indicator 7.3.1:

Lao PDR uses 27 megajoules per dollar. This is higher than the regional average.

Average in the Asia-Pacific

Lao PDR

Units: Megajoules per dollar

Energy

1 USD

³For this report we include "renewables" and "hydro" as renewable energy sources.

Trade

No country is 100% self sufficient in its resource use. Each country imports products that complement domestic supplies, and exports products to generate export earnings. SDG target 17.11 calls on developing countries to increase their share of global exports, measured in economic value. Countries may wish to monitor the amount of natural resources that are exported as well as the value. This will determine whether developing countries are able to increase their share of exports by adding value to their natural resource exports or by increasing the physical amount of exports.

The SDGs relevant to materials are:

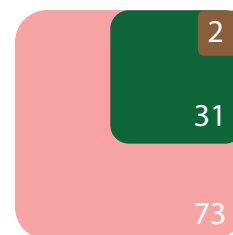

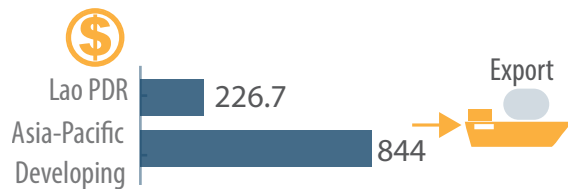

SDG Target	IAEG Indicator	Lao PDR		Asia-Pacific Developing	
		2010	2015	2010	2015
17.11 – Exports of developing countries	17.11.1 – Developing countries and least developed countries export value				
	Exports (<i>million dollars</i>)	1,073	1,592	2,299,614	3,189,657
	Exports (<i>million tonnes</i>)	1	1.5	1,706	2,305
	Unit price of exports (<i>dollars per kilogram</i>)	1	1.1	1.3	1.4

Lao PDR exported 1.5 million tonnes of materials in 2015. On a per capita basis, this is 214 kilograms per year.

In 2015 the value of exports was \$1.6 billion in total, or \$227 per capita, which was lower than the value for Asia-Pacific developing countries (\$844 per capita).

The unit price for exports was \$1.06 per kg, which is lower than the regional average of \$1.38 per kg.

The Material Footprint of the exports was 31 million tonnes in 2015, which was 43% of materials entering into Lao PDR's economy.

- **Materials exported:** 2 million tonnes
- **Materials needed to produce exports:** 31 million tonnes
- **Materials entering Laos's economy:** 73 million tonnes

Water

Unlike other natural resources, water is often reused multiple times in the same year. Furthermore, the great majority of it is extracted from sources which will replenish themselves naturally, via the hydrological cycle, so issues of its usage are really those of managing a renewable resource flow rather than managing a depleting non-renewable resource stock. The water use indicator presented here reports total fresh water abstractions for use in agriculture, industry and in the residential sector, from all surface and underground sources. Direct rain fed onto crops is not included. The total water withdrawals indicator by itself is not an indicator of water stress as it does not include information on the natural availability of water in the region where withdrawals take place.

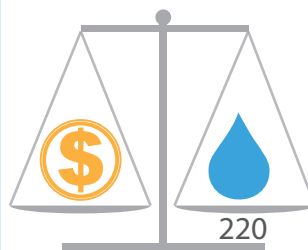

The SDGs relevant to materials are:

SDG Target	IAEG Indicator	Lao PDR		Asia-Pacific Developing	
		2010	2015	2010	2015
6.4 – Increase water-use efficiency	6.4.1 – Water Intensity (litres per US dollar)	876	604	304	220

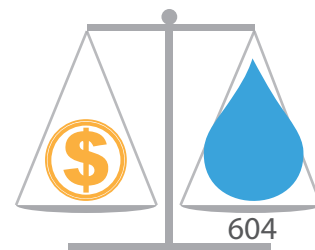

IAEG indicator 6.4.1:

Lao PDR used 604 liters of water per dollar GDP in 2015. This is far more than the regional average (220 liters per dollar).

Average in the Asia-Pacific

Lao PDR

Units: litres per dollar

 Water

 1 USD
