MARKS**

Environmental
Politics and Policy,
Dublin City
University

Join us for a multistakeholder dialogue comprised of organizations working in national contexts of SEA, the ASEAN, and EU level.

Aligning climate change & human rights in supply chains with the transboundary haze problem and right to breathe clean air.

Objectives:

- Mainstream the notion that clean air is a basic human right.
- Commit to integrating transboundary haze mitigation & the human right to a clean environment into climate change mitigation project scopes.
- Strengthen the outline for long-term strategic plans to address air pollution hazards
- Create the relational underpinnings for multistakeholder collaboration towards clean air programming, in support of national and regional policy change in Asia.
